

HOW TO MANAGE THE EXPORT OF DUAL-USE ITEMS

MAKE SURE YOU DON'T END UP ON THE BAD SIDE OF THE LAW

Some technology, goods, and software that seems innocent is in fact classified by government and international organizations as 'dual-use' technology. These items could potentially be rigged to support nefarious and hazardous ends.

Therefore, the EU has initiated strict legislation regulating import and exports of various such items currently being used and developed in the health, high-tech, and life sciences sectors.

Crucially, the legislation stipulates that it is up to the company, researchers, and individuals to make sure they comply with regulations. But the list is long, diverse, changes annually and may be not very straightforward. How, then, do you make sure you don't end up the bad side of the law?

By coming to this seminar! It will specifically focus on current and emerging export controls related to health and life sciences and high-tech. Don't miss it!
