

RECYCLING

FOR A SUSTAINABLE FUTURE

In this Visionary Seminar, we will explore every facet of the recycling industry as part of the circular economy. Belgium is recognized as being a pioneer in this field.

According to the principles of a circular economy, increased maintenance, reuse and reprocessing must be considered right from the product design stage, while avoiding waste and environmental pollution. Also, the use of critical raw materials that are subject to supply shortage is an essential aspect.

Material shortage is an outlook we cannot escape, we can, however, change how we deal with that. Undoubtedly, sustainable product design has never been more important. From the purposeful use of plastics design, and recycling precious metals to upcycling aircrafts, our speakers will leave no stone unturned!

WE INVITE YOU TO LEARN FROM:

Koen Staut
Aerocircular

Egbert Lox
Umicore

Els Du Bois
UAntwerpen

Yolan Gielen
Circular Flanders

Jef Peeters
KU Leuven

Karel Van Acker
KU Leuven

TUESDAY
24 NOV 2020
